Summer and barbecuing go hand in hand but rest assured that you can still prepare healthy and tasty meals by working in a little extra magic into your preparation methods. Grilling any type of meat, even chicken or fish, until it's charred or burned can increase your chances of getting cancer, according to the American Institute for Cancer Research. Carcinogens, or cancer causing agents, are formed on the surface of meats by smoke and flame flares which occur when fat and juices drip down onto the heat source below. Grilling vegetables and fruits does not create carcinogens so that's a great reason to add these to your shopping list. To minimize your exposure to carcinogens when grilling meats, follow these suggestions:

- **Keep is Short and Sweet**: Since carcinogens continue to build as meat stays on the grill, take measures to reduce meat's time under the hood. This means removing prior to the “well done” state. Also, partially pre-cooking in doors for 2-5 minutes draws out most of the harmful chemicals without sacrificing moistness.

- **Go Lean**: To reduce grill flare ups, choose lean cuts of meat such as “loin, round, flank, or boneless & skinless, and trim all visible fat prior to grilling.

- **Soak in the Flavor**: Marinating adds flavorful flair to meats and a study in the Journal of Food Science found that marinating reduces the build-up of carcinogens. Marinades containing herbs such as thyme, rosemary, oregano, basil, garlic, and acidity appear to be the most effective in lowering the formation of carcinogens.

- **Bar the Char**: Since carcinogens are concentrated in charred portions of meats, trim and discard those pieces prior to eating.

- **Clean you grill**: Scrub your grill will after each use to prevent a build up of carcinogens that can be transferred to you next meal.

- **Aluminum foil**: Spread foil on the grill and make sure to make small holes in it to allow fat to drain. This will reduce flare-ups.

- **Mainly sides**: Fill your plate with fresh fruits and veggies and leave about ¼ of your plate for the grilled meat. Not only will you control calories and fill up on a healthy dose of fiber, vitaminings, minerals, and phytonutrients, but by keeping the meat portion small, you also reduce your carcinogen exposure.

- **Be adventuresome**: Add non-traditional grill foods, such as vegetables, veggie burgers, quesadillas, figs or even pizza, to your repertoire.

Recipe: Grilled pineapple

**Dietitian’s tip**: Pineapple is a good source of vitamin C. One-half cup pineapple provides 12 milligrams of vitamin C — about 20 percent of your daily need for vitamin C.

By Mayo Clinic staff

Serves 8

**Ingredients**

- For the marinade:
  - 1 tablespoon olive oil
  - 1/4 teaspoon ground cloves
  - 1 teaspoon ground cinnamon
  - 2 tablespoons dark honey
  - 1 tablespoon fresh lime juice
  - 1 firm yet ripe pineapple
  - 1 tablespoon dark rum (optional)
  - 1 tablespoon grated lime zest

**Directions**

- Prepare a hot fire in a charcoal grill or heat a gas grill or broiler (grill).
To make the marinade, in a large bowl, combine the olive oil, cloves, cinnamon, honey and lime juice and whisk to blend. Set aside.

Cut off the crown of leaves and the base of the pineapple. Stand the pineapple upright and, using a large, sharp knife, pare off the skin, cutting downward just below the surface in long, vertical strips. Cut off any remaining small brown “eyes” on the fruit. Stand the peeled pineapple upright and cut it in half lengthwise. Place each pineapple half cut-side down and cut it lengthwise into four long wedges; slice away the core.

Place the pineapple in the bowl with the marinade and stir to coat the pineapple.

Place on the grill and cook about 3 to 4 minutes, basting once or twice with the remaining marinade. Turn the fruit and move it to a cooler part of the grill or reduce the heat. Baste again with the marinade. Grill until the pineapple is tender and golden, about 3 more minutes.

Remove the pineapple from the grill and place on a platter or individual serving plates. Brush with the rum, if using, and sprinkle with the lime zest. Serve hot or warm.
