Does your child love building with Legos? At Lego Robotics, your child will learn how to design, build, and program working robots using the Lego Mindstorms NXT robotics kit. Because camp activities are hands-on and engaging, children as young as third grade will learn valuable problem solving methods, engineering concepts, and computer skills. At the conclusion of the camp, your child will use his/her new-found skills to create a robot that will be able to navigate multiple challenges on a Martian landscape.
